  /img/                          all images and animated GIFs/WebPs
  /audio/                        all MP3 files
  convert_anim.bat               MP4 to GIF/WebP converter
  convert_secwatch.bat          MP4 to WebM converter (backup)
```

TOOL REFERENCE

convert_anim.bat Converts MP4 to animated GIF or WebP. Run it, type filename, pick camera profile, pick format. Output goes to same folder. Drop result in /img/.

To activate animation in HTML: Find the camera in the CAMS registry and add:

`anim: 'img/FILENAME.gif'` The anim field takes priority over img automatically.

FFmpeg camera profiles: 1 = Hargrove Interior (CAM1-5) 2 = CAM6 / Event clips 3 = LKCO Exterior (CAM7-8) 4 = CAM9 East Wall (darkest)

DAY 1 ASSETS

day1.html — Night of 01/15/94, 23:51

IMAGES /img/

Hargrove Business Center

File	Description	Status
cam1.png	Lobby, front desk, mug visible, exit sign in bg	DONE
cam2.png	Corridor, dark, fire door visible at far end	DONE
cam3.png	Corridor, lit, scuff marks on floor	DONE
cam4.png	Elevator bank, 4th floor, fisheye lens	DONE
cam5.jpg	Parking lot, single lamp, empty	DONE
cam6.jpg	Floor 3 corridor, blank plate, all doors open, debris	DONE
cam6_event1.png	Floor 3, figure at far end under EXIT sign, facing away	DONE

LKCO Strip Site

File	Description	Status
cam7.png	Trailer exterior, door CLOSED, cut wall behind	DONE
cam7_door_open.png	Trailer exterior, door OPEN, same framing	DONE
cam8.png	Access road, fog, reflective post, empty	DONE
cam9.png	East wall, dark version, cable reel visible bottom left	DONE
cam9_event1.png	East wall, figure at base facing wall, work clothes	DONE

Optional / Bonus

File	Description	Status
cam6_event2.png	Alt figure position for Floor 3 — different spot	DONE
cam9_event2.png	Alt figure position for east wall event	DONE
cam9_surge.gif	Brief surge/flare effect before cam9 event — animated	NEEDED

cam9_surge.gif prompt (Veo → convert_anim): Security camera feed surge, east wall, sudden exposure overload, camera auto-adjusting, brief white flare then settling back to degraded signal, 2-3 seconds, no people.

AUDIO /audio/

Phone SFX

Short clips. Can source free SFX online (freesound.org).

File	Description	Length
phone_dial.mp3	Dial tone, loops	2-3 sec
phone_ring.mp3	Single ring, JS loops it	1 ring
phone_busy.mp3	Busy signal, loops	2-3 sec
phone_pickup.mp3	Click of line picking up	0.5 sec
phone_hangup.mp3	Click of line going dead	0.5 sec

Voice — ext.204 Pellegrino Voicemail

File: pellegrino_vm.mp3 **Voice character:** Professional facilities manager. Slightly rushed. Not alarmed yet. End of the message the tone shifts — the Floor 3 warning sounds rehearsed, like he's said it before. **Recording notes:** Office background. Normal room.

Script: "You've reached Randy Pellegrino, Hargrove Properties facilities management. I'm either away from my desk or on another line. If this is regarding the Commerce Boulevard property, the system has been reactivated as of tonight and the night desk has been staffed. If you're calling about the Letcher County site -- [3 second pause] -- leave a number. I'll call you back. Don't go up to Floor 3." [beep sound at end]

Voice — ext.107 LKCO Maintenance Relay

File: maintenance_107.mp3 **Voice character:** Nobody should be answering this line. The site has been closed for eleven years. Whoever picks up sounds like they are very far away. Not threatening. Just distant. Matter of fact. **Recording notes:** Outdoor if possible. Wind sound good. Add room reverb in Audacity. Long pauses are important.

Script: [3 seconds of silence or wind before speaking] "...maintenance." [4-5 second pause]
"...site's been closed since '83." [line goes dead — stop recording]

Voice — Wrong Number

File: wrong_number.mp3 **Voice character:** Annoyed. Half-asleep. Normal person. **Recording notes:** Casual. No effects needed.

Script: "Yeah?" [2 second pause] "You got the wrong number." [click — stop recording]

Voice — ext.099 Hargrove Family Law

File: ext_099.mp3 **Voice character:** This is the most important phone call in Day 1. Flat voice. No emotion. Slightly hollow, like the person is reading from something. Not robotic — human, but wrong in a way that is hard to place. Professional but not warm. Record this one last. **Recording notes:** Quiet room. No reverb. Flat and close. Slight pause between each line. The long pause before "Don't dig any further" should be 4-5 seconds.

Script: "Hargrove family law." [2 second pause] "We've been expecting a call." [2 second pause] "Which file are you calling about?" [2 second pause] "We have a Combs on file. And a Hargrove." [4-5 second pause] "Don't dig any further." [click — stop recording]

Audio — ext.311

File: ext_311.mp3 **No voice needed. Build in Audacity:**

1. New track, 10 seconds of silence
2. Import any bass-heavy thunder/rumble sound
3. Slow it down 400%, pitch down 4 semitones
4. Layer it starting at the 3 second mark, fading in
5. Let it swell to about 60% volume at 7 seconds
6. Cut at 10 seconds — hard stop
7. Export as MP3

The player dials 311. One ring. Then this. No voice.
The sound should feel like the earth moving, not thunder.

Voice — TAPE_01 Earl Combs Feb 16 1983

File: tape_01.mp3 **Voice character:** Earl is 40s, Appalachian, foreman. This tape is the normal one. He sounds tired but competent. This is the tape that makes the player like Earl before everything gets worse. Record this one warm. **Recording notes:** Outdoor if possible. Some wind okay. Handheld recorder quality — hold the phone slightly away. Background ambient noise adds authenticity.

Script: "February sixteenth. 1983. This is Earl Combs, site foreman, Kelly Branch Number Two. I'm recording this because I want there to be a record that isn't just the computer log.

The east wall crew hit something today at about seventy-eight feet. I sent Darnell and Pete down to probe it. They were down there maybe twenty minutes.

They came back and I asked what they found and Pete said 'Nothing Earl. Just rock.' And Darnell didn't say anything. Walked to his truck and sat there until end of shift.

It wasn't nothing.

I'm going to backfill it in the morning.
I shouldn't have sent them down there."
[stop recording]

Voice — TAPE_02 Earl Combs March 1983 Personal

File: tape_02.mp3 **Voice character:** Same Earl. Different. More quiet. He's been alone for a while now. This sounds like a man talking to himself, not recording for a record. **Recording notes:** Interior. Quiet room. The recording should start mid-sentence as if the recorder was already running when the thought started. Closer mic than tape_01.

Script: [start recording already speaking, no pause at start] "-- don't know if it's the same thing my daddy talked about or something different. He worked a deep mine over in Harlan in the fifties. Said there were places in the earth you could feel before you saw them. Said the old miners had a name for it but wouldn't say the name out loud.

I used to think that was superstition.

[4 second pause]

The wall is warm. I've put my hand on it three times now.
Nothing down here should be warm at night in February.

I'm not going to tell anybody about the wall."
[stop — no click, just end]

Voice — TAPE_03 Earl Final Recording

File: tape_03.mp3 **Voice character:** Earl has made a decision. He is calm in a way that is more unsettling than fear. This is a man who has accepted something. Record this one slowly.

Recording notes: Outdoor. Night if possible. Gravel or ground underfoot sounds at the start — footsteps, then they stop. The long silence in the middle is crucial. Do not rush it.

Script: [sound of footsteps on gravel for 5 seconds] [footsteps stop] "It's March tenth. Equipment pulls tomorrow.

[5 second pause]

I've been thinking about what you say to something like this.
To make sure it understands.

[pause — 3 seconds — then speak quieter, almost to yourself]
You can feel it listening.

[4 second pause — then normal voice again, matter of fact]
Okay. We're done here. The land is sold.
The people who own it now don't know you're there.
And that's how it's going to stay. That's the deal.
Same as before.

[2 second pause]

I need you to let that be enough.

[6-8 second silence]
[something very faint at the end — breathe, or a distant sound]
[tape cuts — stop recording abruptly mid-second]"

Voice — TAPE_04 Hargrove Building Security 03/12/91

File: tape_04.mp3 **Voice character:** Mike Stroud, building security. Young. Nervous but trying to sound professional. This tape is found hidden in the FLOORS directory. The player discovers it. It is not supposed to be there. **Recording notes:** Interior. Hallway echo if possible (bathroom works). Footsteps throughout. Voice changes when he enters Suite 3-C — becomes uncertain, then controlled fear, then the tape cuts. The cut is abrupt.

Script: "Hargrove Building Security, this is Mike Stroud, March twelfth 1991, recording for my own file. I'm on Floor 3, main corridor. [footsteps echoing] Nothing in the corridor. Heading to Suite 3-C. Pellegrino said not to go in but I just want to--

[door opens slowly]

...it's dark. Smells like --

I don't know what that smell is.

There's something on the wall.

Looks like --

[breathing changes — slower, almost controlled]

-- I'm going to come back with a flashlight.

[1 second pause]

I'm going to come back with a--"

[hard stop — tape ends]

Voice — TAPE_05 Earl Combs October 1982 Site Survey

File: tape_05.mp3 **Voice character:** Earl before everything. This is the most important tape for emotional impact. He sounds genuinely happy here. Content. This is who he was before 1983. Record this one bright and warm — completely different energy from tapes 01-03. **Recording notes:** Outdoor. Daytime if the ambient sounds different. Wind is fine. Upbeat, professional, like a man who loves his job and his corner of the world.

Script: "October second, 1982. Earl Combs recording initial site survey for Kelly Branch site four. Seam looks good from the surface survey. Should be a productive season.

Good crew lined up -- Darnell and Pete are back,
Ricky Meade's boy is joining us this winter.

[sound of wind, natural pause — he's just looking around]

I like this part of the county.
Good and quiet.

[another pause]

Yeah.

Should be a good winter."

[stop recording — natural end, not a cut]

Audio — CAM9 Static

File: cam9_static.mp3 **No voice needed. Build in Audacity:**

1. Generate 40 seconds of white noise
2. Apply bass boost filter — heavy

3. At 35-37 seconds: add three distinct low-frequency thuds. Not Morse. Not a pattern you'd recognize. Just three slow beats with 1.5 seconds between each. Below 80hz if possible.
 4. After the three beats: back to static, then silence
 5. The three beats should feel like something hitting the inside of a wall from the other side
 6. Does not loop — plays once only
 7. Export as MP3
-
-

DAY 2 ASSETS

day2.html — Morning of 01/16/94, 06:22

NEW IMAGES NEEDED /img/

File	Description	Notes
cam1_d2.png	Same lobby as cam1.png	The coffee mug has moved. It is now on the floor beside the desk. Still upright. Still the same mug. Nobody moved it. The building was empty all night. Generate with same framing as cam1.png.
cam6_d2.png	Same Floor 3 corridor as cam6.jpg	One door is now closed. Suite 3-C specifically. All other doors remain open from the Day 1 blank plate. Just that one door. Closed.
cam9_d2.png	Same east wall as cam9.png	The cable reel that was visible bottom-left in cam9.png is gone. Nothing else changed. No drag marks. Just gone. Use same framing.

Generation note: These three images need to feel identical to Day 1 versions except for the one detail. Same framing. Same lighting. Same grain level. The wrongness should be subtle enough that players who go back and compare will feel it more than players who notice immediately.

NEW AUDIO /audio/

Voice — Pellegrino Day 2 Opening

File: pellegrino_d2_open.mp3 **Voice character:** Pellegrino on the phone at 6am. He hasn't slept. He sounds like a man who has been sitting by the phone since 2am. Not panicking — Pellegrino doesn't panic — but the effort of staying calm is audible. **Recording notes:** Close mic. Interior. The line quality should sound slightly different from a landline — add very light phone EQ in Audacity (cut below 300hz, cut above 3khz).

Script: "Thank God. Listen -- did you file your incident report yet?" [stop here — the JS will wait for player response]

Voice — Pellegrino Day 2 Camera Question

File: pellegrino_d2_cam6.mp3 **Voice character:** Same call. He's asking carefully. He already knows the answer. He needs to hear you say it.

Script: "The Floor 3 camera. It shows a brief reconnection at 02:19 last night. Did you -- did you see a feed?" [stop]

Voice — Pellegrino Day 2 Badge Reveal

File: pellegrino_d2_badgeA.mp3 **Voice character:** This is the moment Pellegrino says something he has never said out loud to anyone. Long pauses. He is choosing words very carefully.

Script: "David Hargrove has been dead since March of 1991." [3 second pause] "His badge shouldn't work. It was physically destroyed." [4 second pause] "I destroyed it myself." [stop]

Voice — Pellegrino Day 2 Closing

File: pellegrino_d2_close.mp3 **Voice character:** Final words of the call. He sounds like he has already decided to disappear after this. Very quiet. Not dramatic. Just done.

Script: "Listen. Don't go back in that building." [2 second pause] "If Aldridge and Carr asks -- tell them the system needs another week. Tell them anything." [3 second pause — barely audible] "Just don't go back in." [click — line goes dead]

Voice — TAPE_06

File: tape_06.mp3 **Voice character:** This is the most disturbing recording. It is Earl. But wrong.

Not afraid — that would be easier to process. He sounds like a man who has been underground for a very long time and has stopped noticing. Flat. Slow. The detail about Ricky Meade's truck is important — say it like you've been thinking about it for months. **Recording notes:** Record in a small room, close mic, no reverb. The closer and flatter the better. Pauses are crucial. Do not rush any of them. The tape cuts at the end — hard stop, no fade.

Script: "I don't know when this is. I don't have a watch anymore.

[4 second pause]

The wall is -- it's different now.

Since we backfilled.

It's not warm anymore.

[3 second pause]

It's hot.

[5 second pause]

I keep thinking about Ricky Meade's truck.

Still in his driveway.

Nobody went to get it.

[8 second pause]

I shouldn't be this far down.

[3 second pause]

I can see light."

[hard cut — stop recording immediately after "light"]

DAYS 3-7 ASSETS

Not yet built — reference only

DAY 3 — LETCHER COUNTY RECORDS OFFICE

UI style: County Clerk Access System v1.2 (1987) Different terminal font — slightly wider characters. Amber on dark brown rather than green on black.

New images needed:

- county_terminal.png — background/wallpaper for this UI A wood-paneled government office. Fluorescent lights. Filing cabinets. The terminal on a desk.

Key mechanic: Printer queue. The 1987 print job that never printed contains the player's name. The name comes from the name-game module (Day 1).

No new audio needed for Day 3.

DAY 4 — RICKY MEADE'S HOUSE

UI style: TRS-80 or Commodore aesthetic. White on black. Different font entirely. Personal computer, 1983. It has been running since then.

New images needed:

- ricky_house_exterior.png Rural house. Day or dusk. A truck in the driveway. The truck has been there since 1983. Weeds around it. Nobody ever came to get it.
- ricky_terminal.png The home computer screen. Old. A blinking cursor. The room around it dark.

No new audio needed for Day 4.

DAY 5 — UNDERGROUND (EAST WALL BENCH LEVEL)

UI style: Pure text. No panels. Full screen terminal. This is the most minimal UI in the game. Green on black. Nothing else.

New images needed: None. This day is entirely text-based.

New audio needed:

- underground_ambient.mp3 Low hum. Not mechanical. Something between wind and breathing. Very low frequency. Loops. Build in Audacity: sine wave at 40hz, very quiet, with slow volume modulation (0.1hz LFO). Should feel like pressure rather than sound. 8-10 seconds, seamless loop.
 - wall_warm.mp3 A single sound that plays when the player types TOUCH WALL for the first time. Not a voice. Not a sound effect. The closest description: the sound of something very large shifting its attention. Build: low rumble, slow attack 3 seconds, hold 2 seconds, slow fade 3 seconds. Total 8 seconds. Does not loop.
-

DAY 6 — HARGROVE FAMILY HOME

UI style: HomeSafe v3.2 (1991 home security terminal) Blue-gray on dark. Slightly more consumer-friendly than the Hargrove business terminal. Menus instead of pure command line — some things are selectable with numbers rather than typed.

New images needed:

- hargrove_house_exterior.png Upper-middle class house, 1994. Maintained but empty. Nobody has lived here in three years. Lights on inside. Nobody home.
- hargrove_safe_interior.png Inside an open safe. Documents visible. A manila envelope. A photograph face-down. Do not show what the photograph depicts.

New audio needed:

- house_ambient.mp3 Empty house. Refrigerator hum. Very faint. The kind of quiet that only happens in houses where nobody has spoken in years. Loops.
-

DAY 7 — BACK TO SECWATCH

UI style: Identical to Day 1. SECWATCH v2.11b. Same boot sequence. Same layout. The date is wrong: 03/11/83 07:08. The badge is Earl's: #0088.

New images needed:

- cam9_1983.png East wall, 1983 version. Identical framing to cam9.png but the cable reel IS there. It looks newer. The wall looks the same. It always looks the same. This is the last image in the game.

New audio needed:

- earl_walking.mp3 Footsteps on gravel. 30 seconds. Getting slightly quieter as he walks away. No voice. Just footsteps on the ground. Fading to silence. This plays during the final CAM9 sequence.
-
-

BADGE LOGIN SYSTEM (To be built)

Four special badge numbers that unlock hidden content.

Players find these numbers embedded in the files.

Badge	Found In	Unlocks
0023	BADGE.LOG (Day 1)	PERSONAL directory, alternate incident view
0047	BADGE.LOG (Day 1)	D. Hargrove access — system accepts it, logs it, changes Day 2
0088	SITE94.CFG (Day 1)	Day 7 early access, 1983 LKCO filesystem
1983	Source code comment only	C:\BEFORE — one file, a coordinate

The coordinate in C:\BEFORE points to a real location in Letcher County, KY. Decide what that location is. The game never explains why that coordinate matters.

THREAT LEVEL SYSTEM (To be built)

Four bars. All start at 0. Max 10.

Bar	Raises When
HARGROVE	CAM6 event, BADGE.LOG read, incident report read, badge 0047 login
LKCO	FOREMAN.LOG read, COMBS.TXT opened, TAPE_03 played, CAM9 viewed 3+ times
SYSTEM	SCANDISK after ghost file, ext.099 dialed, WITNESS.TXT read, ext.311 dialed
EAST WALL	Raises on its own over time. 1 tick per 3 real minutes. Resets only if player chooses Y at Day 5 boundary.

Events at each combined level documented in design notes. OBSERVER LOGGED appears on camera HUD when East Wall hits 7.

DIALOG TO RECORD — COMPLETE LIST BY DAY

Day 1

- pellegrino_vm.mp3 ← script above
- maintenance_107.mp3 ← script above
- wrong_number.mp3 ← script above
- ext_099.mp3 ← script above
- tape_01.mp3 ← script above
- tape_02.mp3 ← script above
- tape_03.mp3 ← script above
- tape_04.mp3 ← script above
- tape_05.mp3 ← script above

Day 2

- pellegrino_d2_open.mp3 ← script above
- pellegrino_d2_cam6.mp3 ← script above
- pellegrino_d2_badgeA.mp3 ← script above
- pellegrino_d2_close.mp3 ← script above
- tape_06.mp3 ← script above

Day 3

- Nothing to record

Day 4

- Nothing to record

Day 5

- Nothing to record (text-only day)

Day 6

- Nothing to record

Day 7

- earl_walking.mp3 ← footsteps only, no voice

Total voice sessions needed: 2

One session as Pellegrino (middle-aged, professional, tired)

One session as Earl (Appalachian foreman, changes across tapes)

Recording order recommendation: Session 1 — Earl, record in this order: tape_05 first (warm, upbeat — sets the character) tape_01 (tired but normal) tape_02 (quieter, alone) tape_03 (calm acceptance) tape_06 last (hollow, wrong — you'll know the character well enough by now to find this voice)

Session 2 — Pellegrino:

pellegrino_vm first (professional, rehearsed)

pellegrino_d2_open (hasn't slept)

pellegrino_d2_cam6 (careful)

pellegrino_d2_badgeA (this is the hard one — take your time)

pellegrino_d2_close (already gone)

AUDACITY TIPS FOR THIS PROJECT

Phone EQ (for Pellegrino calls): Effect → Equalization Cut everything below 300hz Cut everything above 3400hz Adds the telephone narrowband sound

Tape hiss (for Earl recordings): Generate → Noise → White noise at -30db Mix under the recording track Gives the cassette texture

Tape warble (for tape_06 specifically): Effect → Pitch → slight wobble Or Effect → Tremolo at very slow rate Makes it sound like an old tape with worn heads

Export settings: Format: MP3 Bit rate: 128kbps All files

Production Bible v1.0 SECWATCH — 7 Day Creepypasta Experience Keep offline. Do not publish.
